Bilkent University Computer Engineering Department

MS and PhD Programs

Prof. Dr. Selim Aksoy

Research Areas

- Algorithms
- Artificial intelligence
- Big data
- Bioinformatics
- Cloud computing
- Computational biology
- Computational geometry
- Computer architecture
- Computer graphics
- Computer networks
- Computer vision
- Cryptography
- Data mining
- Data science
- Data security
- Database systems
- Graph visualization
- High performance computing
- Image analysis
- Information retrieval
- Machine learning
- Mobile systems
- Parallel and distributed systems
- Pattern recognition
- Robotics
- Scientific computing
- Software engineering
- Virtual reality

Applications

- Application Deadlines:

  March 31, 2022 (early-bird deadline)

  May 31, 2022 (regular deadline)

- Online Application:

  https://stars.bilkent.edu.tr/gradapp/

- Requirements for application:
  - CGPA ≥ 2.80 / 4.00
  - ALES (Turkish citizens) or GRE (Foreign applicants)
    - ALES: Quantitative ≥ 55 (for MS), 80 (for PhD w/o BS)
    - GRE: Quantitative ≥ 153 (MS), 157 (PhD)
  - English Proficiency: TOEFL (IBT) ≥ 87 or IELTS avg ≥ 6.5 (and min 5.5 in each section)
  - And YDS ≥ 55 (for Turkish citizen applying PhD).

Interview

- Date: we will inform applicants about interview dates
- If not uploaded during online application, hard copy documents to be submitted during interview:
  - Transcript
  - ALES or GRE score report
  - Proof of English Proficiency
    (TOFLE, IELTS or YDS report)

Acceptance Requirements

- Grad committee approval
- At least one faculty member willing to work with the applicant towards thesis
- Passing the interview and department approval
- Graduate School of Engineering and Science approval

Scholarship Options

- Department scholarship
  - Tuition waiver (100%)
  - Stipend (paid by Department)
  - Eligibility for accommodation in dormitories or University housing
  - Health Insurance
  - Office (shared)
  - Meal Card support (for Ph.D. students)

Scholarship Options

- TÜBİTAK scholarship or TÜBİTAK projects
  - Tuition waiver (100%)
  - Stipend (paid by TÜBİTAK)
  - Eligibility for accommodation in dormitories or University housing
  - Accommodation financial aid from University
  - Health Insurance
  - Office (shared)
  - Bilkent Spending Card support (for Ph.D. students)
  - Meal Card support (for Ph.D. students)

Scholarship Options

- Project grants (other than TÜBİTAK projects)
  - Tuition waiver (100%)
  - Stipend (paid from the project budget)
  - Eligibility for accommodation in dormitories or University housing
  - Health Insurance (paid from the project budget)
  - Office (shared)
  - Meal Card support (for Ph.D. students)
- Graduate School scholarship
  - Tuition waiver (between 80% - 100%)

Degree Requirements

- MS
  - 7 technical elective courses + Seminar +
    MS Thesis +
    Research Methods and Academic Publication Ethics course
- PhD
  - 7 technical elective courses + Seminar +
    Qual Exam + PhD Thesis + Journal Publication +
    Research Methods and Academic Publication Ethics course

Projects

- Discovery and characterization of genomic variation
  - Funded by EU Marie Curie Actions Career Integration Grant
- Algorithms and hardware designs for ultra-fast mapping of HTS reads to reference genome assemblies
  - Funded by US National Institutes of Health
- De novo and hybrid (multi-platform) sequence assembly.
- Genomic repeat discovery, classification and annotation.
- Distributed algorithms for genome assembly.

Positions available. Contact if you have B.Sc. or M.Sc. degree in computer science, computer engineering, electrical engineering, or mathematics, and if you are interested in combinatorial optimization, approximation algorithms, and graph theory. Strong programming skills in C/C++ are highly desired.

Successful applicants will also have a chance to contribute to many international consortiums such as the 1000 Genomes Project and the Genome 10K, and will involve in other international collaborations with researchers in Vancouver, Seattle, Barcelona, Bari, Pittsburgh, and more.

Basic understanding of biology/genetics/genomics is a *plus*, but **not required**.

cs.bilkent.edu.tr/~cicek

My research focuses on building algorithms for analyzing biological data using various biochemical networks. Even though it took 13 years and ~$1b to sequence the first genome, right now, it takes a day and ~$1k. This has resulted in accumulation of vast amounts of information. Consequently, biosciences have faced the problem of “big data”. Today, the bottleneck in the bio-research is the lack of computational power and algorithms that can efficiently analyze the data and make discoveries. Central dogma in molecular biology dictates the information flow from DNA -> RNA --> Protein --> Metabolite. Each layer introduces 20k, 100k, 1m, and 3k variables respectively. The search space for even a basic pattern discovery is clearly intractable. I design machine learning algorithms that use biological networks to prune the search space and discover biomarkers in particular for genetic Diseases.

Gene Discovery for Autism Spectrum Disorder

-Broken interplay between 1000 genes lead to autism.

-So far we have only discovered ~50 of them, Biological networks along with intelligent search algorithms needed to discover new genes to understand the genetic architecture.

Using Dynamic Network Algorithms to Model Neurodevelopment.

-Autism is a neurodevelopmental disorder and affects evolving the gene interaction networks of the fetal period to early childhood.

-We design algorithms that analyze the dynamic networks to understand the functionality autism affects.

Metabolic Networks to Understand Cancer

Metabolites are the small compounds in the body and have been found to be key biomarkers to define certain tumors.

We use network algorithms and build online systems that analyze metabolic signatures in tumors and understand the differences within the subtypes of the same cancer.

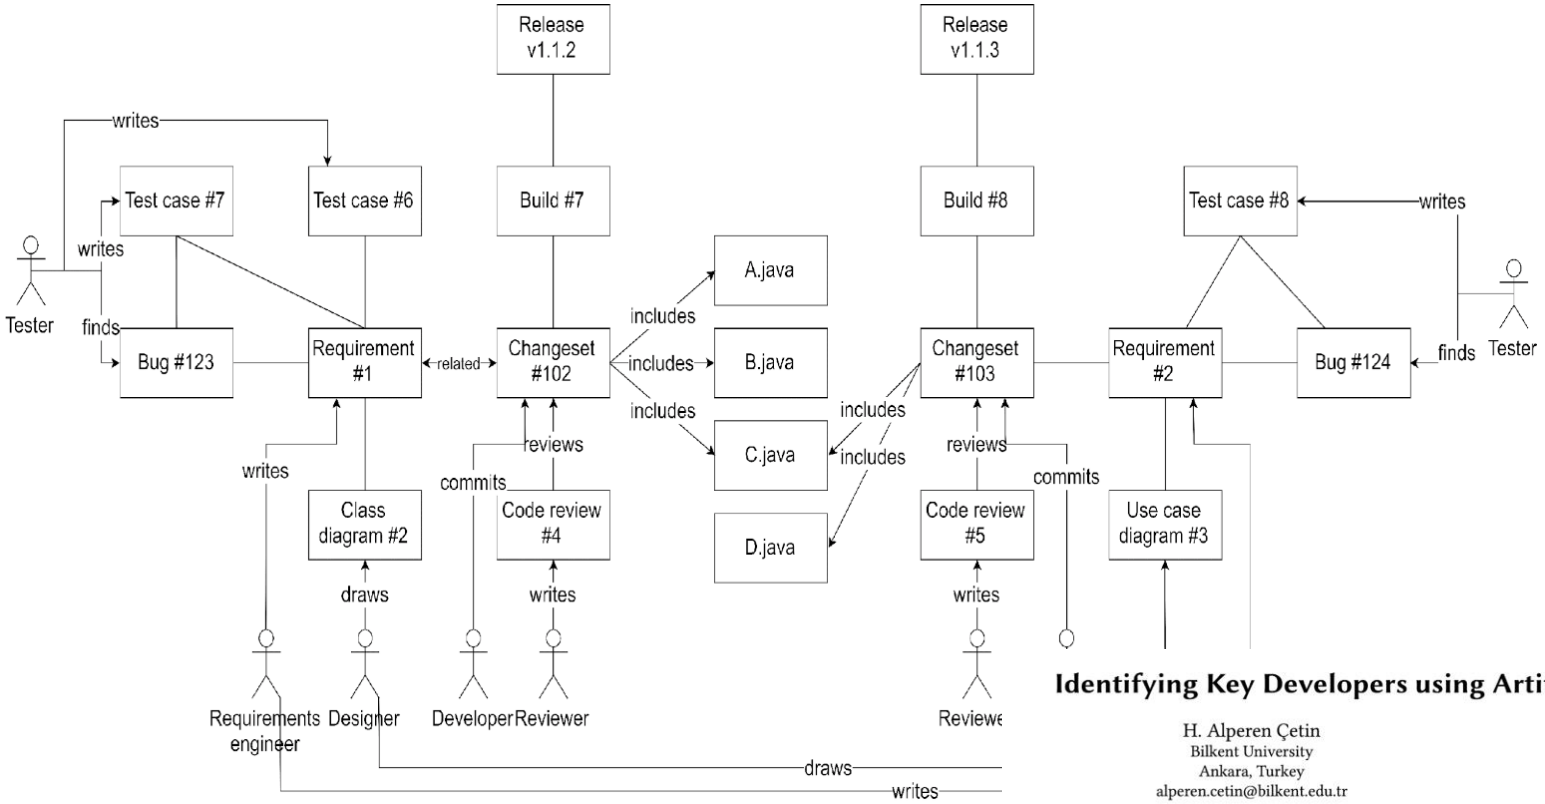
Mining Software Engineering data



Analyzing Developer Contributions using Artifact Traceability Graphs

H.Alperen Cetin, Eray Tuzun

Bilkent University

Ankara, Turkey

Abstract

Software artifacts are the by-products of the development process. Throughout the life cycle of a project, developers produce different artifacts such as source files and bug reports. To analyze developer contributions, we construct artifact traceability graphs with these artifacts and their relations using the data from software development and collaboration tools.

ABSTRACT

Developers are the most important resource to build and maintain software projects. Due to various reasons, some developers take more responsibility, and this type of developers are more valuable and indispensable for the project. Without them, the success of the project would be at risk. We use the term *key developers* for

1 INTRODUCTION

Software development mainly depends on human effort. In a project, some developers take more responsibility, and the success rate of the project heavily depends on these developers. Thus, they are valuable and essential to develop and maintain the project, in other words, they are the *key developers* of the project.

Learning Visual Similarity for Image Retrieval with Convolutional Neural Networks

- Finding matching images across large and unstructured dataset plays a key role in many computer vision applications.
- An image retrieval system enables searching and retrieving images from a large dataset of images.
- The aim is learning efficient visual similarity for image retrieval task by revealing resemblances and differences between product images using triplet networks empowered with global descriptors, revised capsule networks, spatial group-wise enhance, and self-attention layer in an end-to-end manner.
