Bilkent University
Computer Engineering Department

MS and PhD Programs
https://w3.cs.bilkent.edu.tr/graduate-programs/
Research Areas

- Algorithms
- Artificial intelligence
- Big data
- Bioinformatics
- Cloud computing
- Computational biology
- Computational geometry
- Computer architecture
- Computer graphics
- Computer networks
- Computer vision
- Cryptography
- Data mining
- Data science
- Data security
- Database systems
- Graph visualization
- High performance computing
- Image analysis
- Information retrieval
- Machine learning
- Mobile systems
- Parallel and distributed systems
- Pattern recognition
- Robotics
- Scientific computing
- Software engineering
- Virtual reality
Applications

• Application Deadlines:
  March 18, 2024 (early-bird deadline)
  June 4, 2024 (regular deadline)

• Online Application:
  https://stars.bilkent.edu.tr/gradapp/

• Requirements for application:
  – CGPA ≥ 2.80 / 4.00
  – ALES (Turkish citizens) or GRE (Foreign applicants)
    • ALES: Quantitative ≥ 55 (for MS), 80 (for PhD w/o BS)
    • GRE: Quantitative ≥ 153 (MS), 157 (PhD)
  – English Proficiency: TOEFL (IBT) ≥ 87 or
    IELTS avg ≥ 6.5 (and min 5.5 in each section)
  – And YDS ≥ 55 (for Turkish citizen applying PhD).
Interview

- Date: we will inform applicants about interview dates
- If not uploaded during online application, documents need to be submitted during interview:
  - Transcript
  - ALES or GRE score report
  - Proof of English Proficiency (TOFLE, IELTS or YDS report)
Acceptance Requirements

- Grad committee approval
- At least one faculty member willing to work with the applicant towards thesis
- Passing the interview and department approval
- Graduate School of Engineering and Science approval
Scholarship Options

• Department scholarship
  – Tuition waiver (100%)
  – Stipend (paid by Department)
  – Eligibility for accommodation in dormitories or University housing
  – Health Insurance
  – Office (shared)
  – Meal Card support (for Ph.D. students)
Scholarship Options

• **Project grants**
  – Tuition waiver (100%)
  – Stipend (paid from the project budget and Department)
  – Eligibility for accommodation in dormitories or University housing
  – Health Insurance
  – Office (shared)
  – Meal Card support (for Ph.D. students)

• **Graduate School scholarship**
  – Tuition waiver (between 80% - 100%)
Degree Requirements

• MS
  ▪ 7 technical elective courses + Seminar + MS Thesis + Research Methods and Academic Publication Ethics course

• PhD
  ▪ 7 technical elective courses + Seminar + Qual Exam + PhD Thesis + Journal Publication + Research Methods and Academic Publication Ethics course

Dr. Selim Aksoy
Medical Image Analysis

Graph convolutional networks and self-supervised learning

Simultaneous localization and classification

Content-based search of medical archives
Remote Sensing Image Analysis

Increasing spatial resolution (300m $\Rightarrow$ 1-2cm)

Hyperspectral image analysis

Orchard segmentation and agricultural mapping

Multi-source fusion and missing data analysis

Dr. Selim Aksoy
Remote Sensing Image Analysis

Geospatial data mining

Zero-shot learning for object recognition

Attention model for multi-source fine-grained object recognition

Dr. Selim Aksoy
Combinatorial algorithms to analyze high throughput sequence data to discover, genotype, and phase genomic variants, assemble genomes and transcriptomes.
Types of genomic variants

**SNP**: Single nucleotide polymorphism (substitutions)

**Indel**: Insertions and deletions of sequence of length 1 to 50 basepairs

**Short tandem repeats**: microsatellites, minisatellites, alpha & beta satellites, etc.

**Structural variation**: Genomic alterations > 50 bp
- Deletions, insertions, mobile elements, duplications, inversions and translocations

Selected publications

Recipient of the *2010 AAAS Newcomb Cleveland Prize*.

Projects

- Discovery and characterization of genomic variation
  - Funded by EU Marie Curie Actions Career Integration Grant
- Algorithms and hardware designs for ultra-fast mapping of HTS reads to reference genome assemblies
  - Funded by US National Institutes of Health
- De novo and hybrid (multi-platform) sequence assembly.
- Genomic repeat discovery, classification and annotation.
- Distributed algorithms for genome assembly.

Positions available. Contact if you have B.Sc. or M.Sc. degree in computer science, computer engineering, electrical engineering, or mathematics, and if you are interested in combinatorial optimization, approximation algorithms, and graph theory. Strong programming skills in C/C++ are highly desired.

Successful applicants will also have a chance to contribute to many international consortiums such as the 1000 Genomes Project and the Genome 10K, and will involve in other international collaborations with researchers in Vancouver, Seattle, Barcelona, Bari, Pittsburgh, and more.

Basic understanding of biology/genetics/genomics is a plus, but not required.
Research Interests

• Computer Vision
• Pattern Recognition
• Machine Learning

Current Research Topics

• Face Recognition
• Face Presentation Attack Detection
• Anomaly Detection
Unconstrained Face Recognition
Face Presentation Attack Detection

Securing face recognition systems against security threats made by fake biometric traits

Sample data from the MSU dataset. (a) Genuine faces; (b)-(d) Spoof faces.
Anomaly Detection

Developing novel methodologies along with applications to:

Surveillance
Novelty detection
Healthcare
etc.
Bilkent University
High Performance Computing (HPC)

• Recent research interest and expertise
  – Combinatorial scientific computing
  – Iterative solvers: novel partitioning models, algorithms and software utilities for development of parallel iterative methods for linear-system solutions
  – Optimizing latency-centric communication metrics for petascaling sparse solvers
  – Partitioning irregular domains for large-scale parallel processing
  – Locality aware scheduling of irregular applications on Many Core architectures
  – Partitioning models for scaling 1D-, 2D- and 3D-parallel sparse matrix-matrix multiply
  – Partitioning large scale social networks and graph databases
  – Parallel graph analytics kernels for big data applications

– HPC for Machine Learning and ML for HPC
  • Partitioning methods for scalable sparse Tensor decomposition
  • Scaling parallel stochastic gradient descent algorithms for ML
  • Fast and efficient model parallelism for Deep CNNs
  • Task leader in FP7 / Horizon2020 PRACE projects: 1IP, 2IP, 3IP, 4IP, 5IP

Speedup curves of Conjugate Gradient solver for different methods on a Cray and BlueGene/Q machine
(kkt-power matrix: 2 million rows, 12 million nonzeros)

Research Interests

Information Retrieval (IR)
• Information Filtering
• News Aggregation and Categorization
• Turkish Text Mining
• Literature Analysis

Data Stream Mining
• Ensemble Models for Stream Classification
• Multi-label Classification
• Concept Drift Detection
• Multi-stream Processing
• Stance Detection
You are the right person for our group

• If you are good at four core practices of computer science
  • programming,
  • systems thinking,
  • modeling, and
  • innovation.

• If you
  • can dream,
  • can do, and
  • can write.
My research focuses on building algorithms for analyzing biological data using various biochemical networks. Even though it took 13 years and ~$1b to sequence the first genome, right now, it takes a day and ~$1k. This has resulted in accumulation of vast amounts of information. Consequently, biosciences have faced the problem of “big data”. Today, the bottleneck in the bio-research is the lack of computational power and algorithms that can efficiently analyze the data and make discoveries. Central dogma in molecular biology dictates the information flow from DNA --> RNA --> Protein --> Metabolite. Each layer introduces 20k, 100k, 1m, and 3k variables respectively. The search space for even a basic pattern discovery is clearly intractable. I design machine learning algorithms that use biological networks to prune the search space and discover biomarkers in particular for genetic Diseases.
A. Ercument Cicek
cicek@cs.bilkent.edu.tr
cs.bilkent.edu.tr/~cicek

Gene Discovery for Autism Spectrum Disorder

So far, we have only discovered ~50 of the 1000 genes that lead to algorithms needed to discover new genetic architecture.
Using Dynamic Network Algorithms to Model Neurodevelopment.

- Autism is a neurodevelopmental disorder and affects evolving the gene interaction networks of the fetal period to early childhood.
- We design algorithms that analyze the dynamic networks to understand the functionality autism affects.
Metabolic Networks to Understand Cancer

Metabolites are the small compounds in the body and have been found to be key biomarkers to define certain tumors. We use network algorithms and build online systems that analyze metabolic signatures in tumors and understand the differences within the subtypes of the same cancer.
Selected Publications:

- De Novo Chip-Seq Analysis. Genome Biology 2015, 16:205.
- MIRA: Mutual Information-based Reporter Algorithm for Metabolic Networks Bioinformatics 2014, 30(12): i175-i184
I work in the fields of Affective Computing, Computer Vision, and Pattern Recognition.

My current research mainly focuses on multimodal analysis of non-verbal human behavior (e.g. face analysis, gesture recognition, etc.) and deep learning of temporal representations.

Working on Problems and Projects related with Computer Networks and Computer Systems
Wireless Mesh Networks
- Routing
- Channel assignment
- Interference modeling
- Interference mitigation

Testbeds

Cloud Computing
- Resource allocation
- VM placement
- Network virtualization
- Network embedding
- Mobile Edge Computing

Sensor Networks
- Energy efficient routing
- Activity scheduling
- Channel access scheduling
- ZigBee wireless technology
- ZigBee routing

P2P Networks
- Query forwarding
- Free riding
- File sharing and lookup

Internet of Things
- Data and Application Placement
Networks and Systems Research Group

Sample Funded Projects

- Efficient **Resource Allocation in Heterogeneous Cloud Infrastructures**
  *Sponsor: TUBITAK*

- Supporting Real-time Traffic in **Wireless Ad Hoc and Sensor Networks**
  *Sponsor: TUBITAK*

- **Bluetooth Scatternet Construction** and Bluetooth Applications
  *Sponsor: TUBITAK*

- Network Middleware for Environmental Monitoring and Control with **Wireless Ad hoc, Mesh and Sensor Networks**
  *Sponsor: IBM Corporation*

- Intel WCNC, **Wireless Networking** Curriculum Enhancement Project
  *Sponsor: Intel Corporation*

- FIRESENSE Fire Detection and Management through a **Multi-Sensor Network** for the Protection of Cultural Heritage Areas from the Risk of Fire and Extreme Weather Conditions
  *Sponsor: European Commission FP7 Programme, ENV*

- Network of Excellence in **Wireless Communications** (NEWCOM and NEWCOM++)
  *Sponsor: European Commission FP7 Programme, ICT*

High-Performance and Energy Efficient Computing

Algorithms, Systems, and Applications

FPGAs

GPUs

Xeon Phi

Parallel Systems

Novel Architectures
Active projects:

- Energy efficient FPGA accelerators for big data applications (*supported by European Commission, in collaboration with Intel, Oregon*)
- Parallelizing Collaborative Filtering algorithms for recommender systems
- Parallel and vectorized scientific computing algorithms
- Optimizing memory architecture for graph analytics applications for large datasets.

I am interested in graduate student candidates who have one or more of the following:
- Strong algorithmic background and analytical skills
- Interest in solving programming puzzles
- C++ programming skills
- Experience with multi-core, GPU, and/or FPGA programming

Mining Software Engineering data

Identifying Key Developers using Artifact Traceability Graphs

Analyzing Developer Contributions using Artifact Traceability Graphs

H. Alperen Çetin, Eray Tüzün

ABSTRACT
Developers are the most important resource to build and maintain software projects. Due to various reasons, some developers take more responsibility, and this type of developers are more valuable and indispensable for the project. Without them, the success of the project would be at risk. We use the term key developers for these developers.

1 INTRODUCTION
Software development mainly depends on human effort. In a project, some developers take more responsibility, and the success rate of the project heavily depends on these developers. Thus, they are valuable and essential to develop and maintain the project, in other words, they are the key developers of the project.

Abstract
Software artifacts are the by-products of the development process. Throughout the life cycle of a project, developers produce different artifacts such as source files and bug reports. To analyze developer contributions, we construct artifac traceability graphs with these artifacts and their relations using the data from software development and collaboration tools.
Overview of Data Science in SE

Data Science techniques:
- NLP
- classification
- association/patterns
- Graph Mining
- Deep Learning

Software engineering tasks helped by data mining:
- programming
- defect detection
- testing
- debugging
- maintenance

Software engineering data:
- code bases
- change history
- program states
- structural entities
- bug reports
"practice offering software practitioners (not just developer) up-to-date and pertinent information to support their daily decision-making processes and Software Intelligence should support decision-making processes throughout the lifetime of a software system”

Ahmed E. Hassan and Tao Xie

Guess the location of undetected bugs
Who should fix this bug?
Who should review this pull request?
Which files are more likely to be buggy?

Text-to-SQL Systems

- Keyword Mapping
- Explainable Text-to-SQL
- Query Recommendation
Text-to-SQL Systems

Keyword Mapping - mapping between tokens in the query and relational database elements

❖ Keyword mapping formulated as sequence tagging problem in NLP
❖ An end-to-end keyword mapper (DBTagger)

Explainable Text-to-SQL - based on Explainable AI

- Explaining the decisions made by the keyword mapping system using LIME
- A novel wrapper around LIME
- Using a schema graph to explain join-path inference

Text-to-SQL Systems

Query Recommendation

- A ranking method to create a list of suggested queries
- Distributed representations for database tuples, trained on a relational database
- Graph convolutional networks (GCNs) to learn distributed representations
Web Search Engines

- Learning to Rank for Educational Web Search
- Diversification of Search Results
- Efficiency and Scalability Issues

http://www.cs.bilkent.edu.tr/~bilweb
Web Search Engines

Learning to Rank for Educational Web Search - machine-learned ranking models

❖ A rich set of features employed in educational search
❖ Domain knowledge utilized to build query-dependent ranking models

Web Search Engines

Diversification of Search Results

- Multidimensional result diversification
- Supervised learning methods for search result diversification
- Impact of index pruning on diversification performance

Web Search Engines

Efficiency and Scalability Issues

❖ Methods and algorithms for caching, indexing, and query processing in search engines

➢ E. Sarıgil, I. S. Altingovde, R. Blanco, B. Cambazoglu, R. Ozcan, Ö. Ulusoy, ‘Characterizing, predicting, and handling web search queries that match very few or no results’, Journal of the Association for Information Science and Technology (JASIST), 2018.

Multimedia Databases
(joint work with Prof. Uğur Güdükbay)

- Video Retrieval Systems
- Mobile Visual Search
- Learning Visual Similarity for Image Retrieval

Multimedia Databases

BilVideo-7: An MPEG-7 Compatible Video Retrieval System

- Visual Query Interface
- Query Processor
- Raw Video Database (File System)
- Video Processing
  - SBD, Segmentation
  - Object Extraction
  - Annotation
  - etc.
- XML-Native Feature Database (Tamino)
- Feature Extraction
  - MPEG-7 Features
- Automatic processing:
  - segmentation, tracking, feature extraction, annotation, indexing

Powerful querying capability for video data
- keyword and content-based queries
- spatio-temporal object queries

Keywords: trees, greenery, sky – bush, putin, dog

Example query formulation:
- Salient video object extraction
- Automatic processing: segmentation, tracking, feature extraction, annotation, indexing

Example query formulation:
-自动处理：分割、跟踪、特征提取
-示例查询公式：
- 关键词：树木、绿植、天空 – 柏克、普丁、狗

Example query formulation:
- 自动处理：分割、跟踪、特征提取
Multimedia Databases

Mobile Image Search Using Multi-View Object Image Queries

Workflow of the Search System

Early and Late fusion methods

Multi-View Dataset and Queries

Single (a) and multi-view queries and corresponding result lists using early (b) and late (c) fusion methods.

Learning efficient visual similarity for image retrieval by revealing resemblances and differences between product images.

Social Network Analysis

- Misinformation Propagation in Social Networks
- Social Network Data Analysis on Big Data Processing Platforms
Misinformation Propagation in Social Networks

❖ Misinformation problem modelled as a game based on the notion of cooperative games
❖ Agents defined to maximize the total reward
❖ A blockchain - machine learning hybrid approach for addressing misinformation in a crowdsourced environment

Social Network Analysis

Social Network Data Analysis on Big Data Processing Platforms
(joint work with Prof. İbrahim Körpeoğlu)

❖ Community detection formulated as a multi-k-core problem
❖ Distributed multi-k-core construction and maintenance algorithms running on a big data platform

➢ H. Aksu, M. Canim, Y. C. Chang, I. Körpeoğlu, Ö. Ulusoy, 'Distributed k-Core View Materialization and Maintenance for Large Dynamic Graphs', IEEE Transactions on Knowledge and Data Engineering, 2014.
Resource Optimization in Wireless Sensor Networks
(joint work with Prof. İbrahim Körpeoğlu)

- Application placement with shared monitoring points in WSNs
- Application scheduling with multiplexed sensing of monitoring points in WSNs
