Bilkent University
Computer Engineering Department

MSc and PhD Programs

Prof. Dr. Ibrahim Korpeoglu
Research Areas

• Algorithms, artificial intelligence, big data, bioinformatics, cloud computing, computational biology, computational geometry, computer architecture, computer graphics, computer networks, computer vision, cryptography, data mining, data science, data security, database systems, graph visualization, high performance computing, image analysis, information retrieval, machine learning, mobile systems, parallel and distributed systems, pattern recognition, performance evaluation, scientific computing, virtual reality.
Applications

• Application Deadlines:
  Nov 2, 2020

• Online Application:
  https://stars.bilkent.edu.tr/gradapp/

• Requirements for application:
  – CGPA ≥ 2.80 / 4.00
  – ALES (Turkish citizens) or GRE (Foreign applicants)
    • ALES: Quantitative ≥ 55 (for MS), 80 (for PhD w/o BS)
    • GRE: Quantitative ≥ 153 (MS), 157 (PhD)
  – English Proficiency: TOEFL (IBT) ≥ 87 or
    IELTS avg ≥ 6.5 (and min 5.5 in each section)
  – And YDS ≥ 55 (for Turkish citizen applying PhD).
Interview

• **Date:** Close to end of November 2020
  – We will inform applicants about interview dates

• If not uploaded during online application, hard copy documents to be submitted during interview:
  – Transcript
  – ALES or GRE score report
  – Proof of English Proficiency (TOFLE, IELTS or YDS report)
Acceptance requirements

• Grad committee approval
• At least one faculty member willing to work with the applicant towards thesis
• Passing the interview, and department approval
• Graduate School of Engineering and Science approval
Scholarship Options

- **Department scholarship**
  - Tuition waiver (100%)
  - Stipend (paid by Department)
  - Eligibility to accommodate in dormitories or University housing
  - Health Insurance
  - Office (shared)
Scholarship Options

• TÜBİTAK Scholarship or TÜBİTAK projects
  – Tuition waiver (100%)
  – Stipend (paid by TÜBİTAK)
  – Eligibility to accommodate in dormitories or University housing
  – Accommodation financial aid from University
  – Health Insurance
  – Office (shared)
  – Bilkent spending Card (for PhD students)
Scholarship Options

• **Project grants (other than TÜBİTAK projects)**
  - Tuition waiver (100%)
  - Stipend (paid from the project budget)
  - Eligibility to accommodate in dormitories or University housing
  - Health Insurance (paid from the project budget)
  - Office (shared)

• **Graduate School scholarship**
  - Tuition waiver (80%)
Degree Requirements

- **MSc**
  - 7 technical elective courses + Seminar + MS Thesis + Research Methods and Academic Publication Ethics course

- **PhD**
  - 7 technical elective courses + Seminar + Qual Exam + PhD Thesis + Journal Publication Research Methods and Academic Publication Ethics course
**Graduates of MS Program**

VAROL AKMAN

http://www.cs.bilkent.edu.tr/~akman
akman@bilkent.edu.tr.NOSPAM
My current research is two-pronged

1. Contextual reasoning in AI
2. Social aspects of the Internet, esp. twitter
Contextual reasoning in AI

Problems originating from natural language processing and understanding, especially those caused by the lack of explicit context:

• When we say a particular thing, we do so in a context. Thus, there are embedded background assumptions available only through the context. We are also good at shifting between contexts. Can context be formalized in a formal framework? This would lead to improved software not only in NLU but also in knowledge-based systems, robotics, search engines, and personal assistants like Siri, Cortana, OK Google.

My grad course CS 578 (Natural Language Processing) examines contexts, as well as numerous other NLP topics.
Social aspects of the Internet, esp.

Problems caused by tensions between local versus global, individual versus corporate, and democratic versus authoritarian in the framework of the Internet. More specifically:

• Basic concepts and history of the Internet as a socio-political medium. Free access to information in the networked world. The Internet as a trusted communications medium in light of security and privacy issues. Censorship and politics of the Internet vis-à-vis interventions by oppressive governments. Social movements in the 21st century marked by rapid broadcast of ideas and images.

My grad course CS 513 (Implications of the Internet) treats such societal aspects of the Internet. I'm especially interested in twitter as a political medium.
Selim Aksoy
saksoy@cs.bilkent.edu.tr
http://www.cs.bilkent.edu.tr/~saksoy
Office: EA 422 (4th floor)

Research interests:
- Computer vision
- Pattern recognition
- Machine learning

Current topics:
- Medical image analysis
- Remote sensing image analysis
- Image classification
- Object recognition
- Content-based image retrieval
Sponsored Research Projects

- Medical image analysis
  - TÜBİTAK 1001, 2018-2021
  - TÜBİTAK 1001, 2014-2017
  - TÜBİTAK CAREER Grant, 2005-2010

- Remote sensing image analysis
  - TÜBİTAK 1001, 2010-2012
  - European Commission, Joint Research Centre, 2008-2009
  - TÜBİTAK CAREER Grant, 2005-2010
  - FP6 Marie Curie Grant, 2005-2007

- Image and video mining
  - DPT, 2004-2005
Segmentation and classification of cervical cells

Classification of prostate biopsies

Content-based search of medical archives

Dr. Selim Aksoy
Medical Image Analysis

Different weakly supervised learning scenarios

Whole slide imaging

(100,000 x 100,000 pixels, 30 GB/image)

Deep networks for region of interest detection

Dr. Selim Aksoy
Convolutional neural networks for region of interest classification

Deep feature representations

Conditional random fields for weakly supervised learning

Convolutional neural networks for region of interest classification

Computer aided diagnosis of breast biopsies
Remote Sensing Image Analysis

Increasing spatial resolution (300m $\Rightarrow$ 1-2cm)

Hyperspectral image analysis

Orchard segmentation and agricultural mapping

Multi-source fusion and missing data analysis

Dr. Selim Aksoy
Remote Sensing Image Analysis

Geospatial data mining

Zero-shot learning for object recognition

Attention model for multi-source fine-grained object recognition

Dr. Selim Aksoy
Combinatorial algorithms to analyze high throughput sequence data to discover, genotype, and phase genomic variants, assemble genomes and transcriptomes.

Test genome

Random shearing and Size-selection

Paired-end sequencing

Nature Reviews | Genetics
Genome sequencers

- Roche/454
- AB SOLiD
- Illumina HiSeq2000
- Pacific Biosciences RS
- Ion Torrent PGM
- Ion Torrent Proton
- Illumina MiSeq
- Oxford Nanopore MinION
- Oxford Nanopore GridION

... and more! All produce data with different properties.
Selected publications

Recipient of the 2010 AAAS Newcomb Cleveland Prize.

Projects

- Discovery and characterization of genomic variation
  - Funded by EU Marie Curie Actions Career Integration Grant
- Algorithms and hardware designs for ultra-fast mapping of HTS reads to reference genome assemblies
  - Funded by US National Institutes of Health
- De novo and hybrid (multi-platform) sequence assembly.
- Genomic repeat discovery, classification and annotation.
- Distributed algorithms for genome assembly.

Positions available. Contact if you have B.Sc. or M.Sc. degree in computer science, computer engineering, electrical engineering, or mathematics, and if you are interested in combinatorial optimization, approximation algorithms, and graph theory. Strong programming skills in C/C++ are highly desired.

Successful applicants will also have a chance to contribute to many international consortiums such as the 1000 Genomes Project and the Genome 10K, and will involve in other international collaborations with researchers in Vancouver, Seattle, Barcelona, Bari, Pittsburgh, and more.

Basic understanding of biology/genetics/genomics is a plus, but not required.

Information Retrieval (IR)

- Information Filtering
- News Aggregation and Categorization
- Turkish Text Mining

Data Stream Mining

- Ensemble Models for Stream Classification
- Multi-label Classification
- Concept Drift Detection
- Multi-stream Processing
- Stance Detection
You are the right person for our group

- If you are good at four core practices of computer science
  - programming,
  - systems thinking,
  - modeling, and
  - innovation.

- If you
  - can dream,
  - can do, and
  - can write.
My research focuses on building algorithms for analyzing biological data using various biochemical networks. Even though it took 13 years and ~$1b to sequence the first genome, right now, it takes a day and ~$1k. This has resulted in accumulation of vast amounts of biological data. Consequently, biosciences have faced the problem of "big data." Today, the bottleneck in the bio-research is the lack of computational power and algorithms that can efficiently analyze the vast amounts of data.

Central dogma in molecular biology dictates the information flow from DNA -> RNA -> Protein -> Metabolite. Each layer introduces 20k, 100k, 1m, and 3k variables respectively. The search space for even a basic pattern discovery is clearly intractable. I design machine learning algorithms to prune the search space for even a basic biomarker discovery. The search space is still intractable, but using biological networks, I design algorithms that can analyze the data and make discoveries.

Diseases exist in the form of genetic and biochemical networks. Genetic diseases involve faults in the genetic network. The search space for detecting them is intractable, but using biological networks, I design algorithms that can efficiently discover biomarkers in particular for genetic diseases.
Gene Discovery for Autism Spectrum Disorder
-Broken interplay between 1000 genes lead to autism.
-So far we have only discovered ~50 of them, Biological networks along with intelligent search algorithms needed to discover new genes to understand the genetic architecture.
Using Dynamic Network Algorithms to Model Neurodevelopment.

- Autism is a neurodevelopmental disorder and affects evolving the gene interaction networks of the fetal period to early childhood.
- We design algorithms that analyze the dynamic networks to understand the functionality autism affects.
Metabolic Networks to Understand Cancer

Metabolites are the small compounds in the body and have been found to be key biomarkers to define certain tumors.

We use network algorithms and build online systems that analyze metabolic signatures in tumors and understand the differences within the subtypes of the same cancer.
Selected Publications:

- **De Novo Chip-Seq Analysis. Genome Biology** 2015, 16:205.
- Insights into autism spectrum disorder genomic architecture and biology from 71 risk loci **NEURON** 2015, 87(6):1215–33.
I work in the fields of Affective Computing, Computer Vision, and Pattern Recognition.

My current research mainly focuses on multimodal analysis of non-verbal human behavior (e.g. face analysis, gesture recognition, etc.) and deep learning of temporal representations.

- Computer Systems
- Network and Distributed Algorithms
- Wireless Networks
- Distributed Systems
- Cloud Computing
- P2P Networks
- Sensor Networks
- Internet of Things
- WiFi and Bluetooth
- Big Data Systems
Networks and Systems Research Group

Sample Funded Projects

- Efficient **Resource Allocation in Heterogeneous Cloud Infrastructures**
  Sponsor: TUBITAK

- Supporting Real-time Traffic in **Wireless Ad Hoc and Sensor Networks**
  Sponsor: TUBITAK

- **Bluetooth Scatternet Construction and Bluetooth Applications**
  Sponsor: TUBITAK

- Network Middleware for Environmental Monitoring and Control with **Wireless Ad hoc, Mesh and Sensor Networks**
  Sponsor: IBM Corporation

- Intel WCNC, **Wireless Networking Curriculum Enhancement Project**
  Sponsor: Intel Corporation

- **FIRESENSE Fire Detection and Management through a Multi-Sensor Network** for the Protection of Cultural Heritage Areas from the Risk of Fire and Extreme Weather Conditions
  Sponsor: European Commission FP7 Programme, ENV

- Network of Excellence in **Wireless Communications** (NEWCOM and NEWCOM++)
  Sponsor: European Commission FP7 Programme, ICT
Wireless Mesh Networks
- Routing
- Channel assignment
- Interference modeling
- Interference mitigation

Testbeds

Cloud Computing
- Resource allocation
- VM placement
- Network virtualization
- Network embedding

Sensor Networks
- Energy efficient routing
- Activity scheduling
- Channel access scheduling
- ZigBee wireless technology
- ZigBee routing

P2P Networks
- Query forwarding
- Free riding
- File sharing and lookup

Delay tolerant networks
- Routing and Scheduling
Hidayet Aksu, Mustafa Canim, Yuan-chi Chang, Ibrahim Korpeoglu, Ozgur Ulusoy, *Distributed k-Core View Materialization and Maintenance for Large Dynamic Graphs*, IEEE Transactions on Knowledge and Data Engineering, 2014.

High-Performance and Energy Efficient Computing

*Algorithms, Systems, and Applications*

- Collaborative Filtering
- Graph Analytics
- PageRank
- Scientific Computing

- FPGAs
- GPUs
- Xeon Phi
- Parallel Systems
- Novel Architectures
Active projects:

- Energy efficient FPGA accelerators for big data applications *(supported by European Commission, in collaboration with Intel, Oregon)*
- Parallelizing Collaborative Filtering algorithms for recommender systems
- Parallel and vectorized scientific computing algorithms
- Optimizing memory architecture for graph analytics applications for large datasets.

I am interested in graduate student candidates who have one or more of the following:

- Strong algorithmic background and analytical skills
- Interest in solving programming puzzles
- C++ programming skills
- Experience with multi-core, GPU, and/or FPGA programming

For more information, see www.bilkent.edu.tr/~mustafa.ozdal. You can send an email to mustafa.ozdal@cs.bilkent.edu.tr to set up an appointment.
○ **Computer architecture** - memory scheduling, memory hierarchy design, metrics to consider energy, performance, reliability....

○ **Multicore/Manycore architecture** - design of multicore systems, application mapping, data mapping, communication

○ **Heterogeneous computing** - heterogeneous multicore design, core and cache selection, application execution

○ **Parallel programming/systems/applications** - OpenMP, MPI, GPGPU, application characterization, automatic parallelization, scheduling

○ **Cloud computing** - at the system level and architectural optimizations, heterogeneity aware scheduling

○ **Embedded computing** - energy, performance, ...

○ **Compiler optimizations** - code modifications and optimizations to generate better applications
Current Projects

- Heterogeneous Multicore Design
  *Funding: EC FP7*

- Parallelization for Heterogeneous Multicore Architectures
  *Funding: IBM*

- Utilizing Accelerator Technologies in the Cloud
  *Funding: Türk Telekom*

- Parallelizing Data Mining applications using GPUs
  *Funding: Nvidia*

- Accelerator Design for Graph Parallel Applications
  *Funding: Intel*

Efficient and scalable strategies are of vital importance!
Multimedia Databases
(joint work with Prof. Uğur Güdükbay)

- Video Retrieval Systems
- Mobile Visual Search
- Ottoman Archive Content-Based Retrieval System
BilVideo: Integrated video DBMS supporting low-level, spatio-temporal, motion and semantic querying of videos
BilVideo-7: An MPEG-7 Compatible Video Retrieval System

Video Processing:
- SBD, Segmentation
- Object Extraction
- Annotation
- etc.

Feature Extraction:
- MPEG-7 Features

XML-Native Feature Database (Tamino)

Query Processor

Automatic processing: segmentation, tracking, feature extraction, annotation, indexing

Powerful querying capability for video data:
- keyword and content-based queries
- spatio-temporal object queries

Example query formulation:
- Salient video object extraction
- segmentation

Putin, bush, dog

Keywords: trees, greenery, sky – bush, putin, dog
Mobile Image Search Using Multi-Image Queries

Workflow of the Search System

Early and Late fusion methods

Multi-View Dataset and Queries

Single (a) and multi-view queries and corresponding result lists using early (b) and late (c) fusion methods.
Big Data and Social Network Analysis

Social Network Data Analysis on Big Data Processing Platforms

- Development, implementation and evaluation of algorithms/methods to process/analyze social network data for various social network problems. (joint work with Prof. İbrahim Körpeoğlu)
